2022 3D Report

This past year was a fantastic growth year for 3D in Alberta We saw the Indoor 3D national championship again hosted in Alberta in Lac La Biche who as always hosted an amazing shoot

The year also saw the introduction of the Archery Alberta ASA Tour This was a new venture and format for Alberta and so far has been welcomed by most 3D Archers As it was the first year of the tour there were some growing pains and a few critiques but overall we feel it was very successful

The Outdoor Canadian 3D championship held in PEI was a new format this year molded after the world archery championships, I was there to see the finals but was unable to compete, most of the talk among the archers was not positive of this format style some were not happy with the length of time for elimination, some with the number of targets being reduced and some that didn't like the shoot up style elimination, as always it was the first time the system was tried and it is being looked at presently in ways to improve the archers experience

We are very excited to see that we have seen some clubs coming back to Archery Alberta to partake in the new format and even expand into the target and field realm We are looking forward to welcoming Canadian Archers to Calgary for the 2023 Indoor National 3D Championships March 24-26
